CONTENTS OF VOLUME 40

NUMBER 1

N. W. Klingbeil and J. L. Beuth	1	Continuous delamination of sprayed deposits via applied curvature
G. Nefussi, L. Proslier and P. Gilormini	15	A simulation of cold-roll forming for elastoplastic materials
A. A. Lakis, A. Selmane and A. Toledano	27	Non-linear free vibration analysis of laminated orthotropic cylindrical shells
G. J. Turvey and M. Salehi	51	Elastic large deflection analysis of stiffened annular sector plates
S. Torquato, L. V. Gibiansky, M. J. Silva and L. J. Gibson	71	Effective mechanical and transport properties of cellular solids
A. Muravyov and S. G. Hutton	83	A geometrical interpretation of damping for discrete classically damped systems
F. Yang	87	Impression creep: effects of slip, stick and cavity depth
U. Güven	97	Elastic–plastic stress distribution in a rotating hyperbolic disk with rigid inclusion
Calendar	I	
Announcements	V	

NUMBERS 2–3

Special Issue

Selected papers presented at the

ASIA-PACIFIC SYMPOSIUM ON ADVANCES IN ENGINEERING PLASTICITY AND ITS APPLICATIONS

August 1996, Japan

Editorial	111	
H. M. Zbib, M. Rhee and J. P. Hirth	113	On plastic deformation and the dynamics of 3D dislocations
Y. Shibutani, V. Vitek and J. L. Bassani	129	Nonlocal properties of inhomogeneous structures by linking approach of generalized continuum to atomistic model
W. Yang, M.-X. Chen and Q.-S. Zheng	139	Constitutive modeling of aggregates with evolving inextensible constraints
Y. Liu, Y. Kageyama and S. Murakami	147	Creep fracture modeling by use of continuum damage variable based on Voronoi simulation of grain boundary cavity

P. Sittner, V. Novák and N. Zárubová	159	Deformation by moving interfaces from single crystal experiments to the modeling in industrial SMA
T. Iwamoto, T. Tsuta and Y. Tomita	173	Investigation on deformation mode dependence of strain-induced martensitic transformation in TRIP steels and modelling of transformation kinetics
M. Kawai, M. Morishita, S. Tomura and K. Takumida	183	Inelastic behavior and strength of fiber metal hybrid composite: GLARE
K. Tohgo, M. Mochizuki and H. Ishii	199	Incremental damage theory and its application to glass-particle-reinforced nylon 66 composites
S. Nagaki, Y. Nakayama and T. Abe	215	Relation between damage due to circular holes and local deformation of perforated sheets
M. Tokuda, M. Ye, M. Takakura and P. Sittner	227	Calculation of mechanical behaviors of shape memory alloy under multi-axial loading conditions
F. Yoshida, M. Urabe and V. V. Toropov	237	Identification of material parameters in constitutive model for sheet metals from cyclic bending tests
N. Ohno	251	Constitutive modeling of cyclic plasticity with emphasis on ratchetting
S. R. Reid and J. J. Harrigan	263	Transient effects in the quasi-static and dynamic internal inversion and nosing of metal tubes
Z. Mróz and S. Stupkiewicz	281	Constitutive model of adhesive and ploughing friction in metal-forming processes
K. C. Chan and B. Q. Han	305	High-strain-rate superplasticity of particulate reinforced aluminium matrix composites
Calendar	I	
Announcements	V	

NUMBER 4

Y. Kang, Y.-G. Lee and S.-S. Shyr	313	Influence of bearing damping on instability of asymmetric shafts, part IV: effects of fluid-film bearings
J. C. Choi, Y. Choi and S. J. Tak	325	The forging of helical gears (I): experiments and upper-bound analysis
H.-S. Shen	339	Postbuckling analysis of imperfect stiffened laminated cylindrical shells under combined external pressure and thermal loading
R. Narasimhan and S. K. Biswas	357	A finite element study of the indentation mechanics of an adhesively bonded layered solid
Y.-M. Hwang and H.-H. Hsu	371	Analysis of plate rolling using the dual-stream function method and cylindrical coordinates

G. De Saxce and L. Bousshine 387 Limit analysis theorems for implicit standard materials: application to the unilateral contact with dry friction and the non-associated flow rules in soils and rocks

Q. Chen and C. Levy 399 Comparison of theory with experimental data for a partially covered double-sandwich cantilever beam

Calendar I

Announcements V

NUMBER 5

X. B. Lin and R. A. Smith 405 Fatigue growth simulation for cracks in notched and unnotched round bars

H. Deng and L. Vu-Quoc 421 Dynamics of geometrically exact sandwich structures

L. Hua and K. Y. Lam 443 Frequency characteristics of a thin rotating cylindrical shell using the generalized differential quadrature method

S. Kapuria, S. Sengupta and P. C. Dumir 461 Assessment of sheel theories for hybrid piezoelectric cylindrical shell under electromechanical load

K. Komori 479 Rigid-plastic finite-element method for analysis of three-dimensional rolling that requires small memory capacity

Calendar I

Announcements V

NUMBER 6

R.-F. Fung, J.-S. Huang, Y.-C. Wang and R.-T. Yang 493 Vibration reduction of the nonlinearly traveling string by a modified variable structure control with proportional and integral compensations

K. T. Kim and H. T. Lee 507 Effect of friction between powder and a mandrel on densification of iron powder during cold isostatic pressing

C. M. Ford and L. J. Gibson 521 Uniaxial strength asymmetry in cellular materials: an analytical model

Z. T. Zhang and S. J. Hu 533 Stress and residual stress distributions in plane strain bending

M.-C. Wu and S.-C. Huang 545 Vibration and crack detection of a rotor with speed-dependent bearings

Z. Towarek 557 The dynamic stability of a crane standing on soil during the rotation of the boom

C. Li and J. R. Barber 575 Thermoelastic stability of duplex heat exchanger tubes

U. Güven 589 Stress distribution in a linear hardening annular disk of variable thickness subjected to external pressure

M. K. Ghosh and K. Gupta 603 Thermal effect in hydrodynamic lubrication of line contacts—piezoviscous effect neglected

A. Bokota and S. Iskierka 617 Numerical analysis of phase transformations and residual stresses in steel cone-shaped elements hardened by induction and flame methods

Calendar I

Announcements V

NUMBER 7

Y.-M. Huang and D.-K. Leu 631 Effects of process variables on V-die bending process of steel sheet

J.-B. Han and K. M. Liew 651 Analysis of annular Reissner/Mindlin plates using differential quadrature method

Z.-C. Lin and S.-P. Lo 663 A study of deformation of the machined workpiece and tool under different low cutting velocities with an elastic cutting tool

X. Deng and J. W. Hutchinson 683 The clamping stress in a cold-driven rivet

L. K. Seah, W. C. Fok and S. H. Tan 695 A simplified approach to flange curling of edge stiffened channel beams under pure bending

S.-F. Hwang 711 The buckling of an orthotropic layer on a half-space

Calendar I

Announcements V

NUMBER 8

C. Rajalingham, R. B. Bhat and G. D. Xistris 723 Vibration of circular membrane backed by cylindrical cavity

E. P. Nosyreva and A. Molinari 735 Analysis of nonlinear vibrations in metal cutting

J.-H. Chou, I.-R. Horng and W.-H. Liao 749 Robust observer-based OMF vibration control of flexible linkage mechanisms using piezoelectric films

L. Wu and J. F. Carney III 761 Experimental analyses of collapse behaviors of braced elliptical tubes under lateral compression

Y.-M. Huang and C.-Y. Lee 779 Dynamics of a rotating Rayleigh beam subject to a repetitively travelling force

D.-F. Chang and J. E. Wang 793 Analysis of draw–redraw processes

T. Y. Ng, K. Y. Lam and J. N. Reddy 805 Dynamic stability of cross-ply laminated composite cylindrical shells

Calendar I

Announcements V

NUMBER 9

C. Rajalingham, R. B. Bhat and S. Rakheja 825 Automatic balancing of flexible vertical rotors using a guided ball

M. S. Ellison and E. Corona 835 Buckling of T-beams under cyclic bending

T. Adachi, Y. Tomita and M. Tanaka 857 Computational simulation of deformation behavior of 2D-lattice continuum

Y.-M. Hwang, J.-S. Yang, T.-R. Chen, J. C. Huang and W.-U. Wu 867 Analysis of superplastic blow-forming in a conical closed die

M. P. F. Sutcliffe and P. J. Rayner 887 Experimental measurements of load and strip profile in thin strip rolling

F. P. E. Dunne and I. Katramados 901 Large deformation compression–torsion behaviour of a titanium alloy and its modelling

S. Xu and K. J. Weinmann 913 Prediction of forming limit curves of sheet metals using Hill's 1993 user-friendly yield criterion of anisotropic materials

T. Y. Kam and C. K. Liu 927 Stiffness identification of laminated composite shafts

Calendar I

Announcements V

NUMBER 10

S. X. Li and D. J. Smith 937 Development of an anisotropic constitutive model for single-crystal superalloy for combined fatigue and creep loading

A. N. Kounadis 949 Qualitative criteria for dynamic buckling of imperfection sensitive nonconservative systems

M. Guowei, S. Iwasaki, Y. Miyamoto and H. Deto 963 Plastic limit analyses of circular plates with respect to unified yield criterion

M. Ciavarella, D. A. Hills and G. Monno 977 Contact problems for a wedge with rounded apex

K. Mori, M. Ohashi and K. Osakada 989 Simulation of microscopic shrinkage behaviour in sintering of powder compact

S. A. Elaskar and L. A. Godoy	1001	Constitutive relations for compressible granular materials using non-Newtonian fluid mechanics
P. Papanikos and S. A. Meguid	1019	Three-dimensional finite element analysis of cold expansion of adjacent holes
A. Zavaliangos	1029	Modeling of the mechanical behavior of semisolid metallic alloys at high volume fractions of solid
M. Papini and J. K. Spelt	1043	Indentation-induced buckling of organic coatings Part I: theory and analysis
M. Papini and J. K. Spelt	1061	Indentation-induced buckling of organic coatings Part II: measurements with impacting particles
Obituary	1069	
Calendar	I	
Announcements	V	

NUMBER 11

S. Chakraborty and S. S. Dey	1071	A stochastic finite element dynamic analysis of structures with uncertain parameters
B. Singh and S. M. Hassan	1089	Transverse vibration of a circular plate with arbitrary thickness variation
P. Sundaresan, G. Singh and G. V. Rao	1105	Buckling of moderately thick rectangular composite plates subjected to partial edge compression
K. H. Low, G. B. Chai T. M. Lim and S. C. Sue	1119	Comparisons of experimental and theoretical frequencies for rectangular plates with various boundary conditions and added masses
R. Kulchytsky-Zhyhailo and A. Yevtushenko	1133	Axi-symmetric contact problem with frictional heating for thermally nonlinear sliders
B. C. Simonsen	1145	Plate tearing by a cone
C. S. Huang, Y. P. Tseng, A. W. Leissa and K. Y. Nieh	1159	An exact solution for in-plane vibrations of an arch having variable curvature and cross section
P. Redanz	1175	Numerical modelling of cold compaction of metal powder
Calendar	I	
Announcements	V	

NUMBER 12

Gai Bingzheng	1191	The correction of hardness value measured on a curved surface specimen

De-Yuan Zhang and Ding-Chang Chen	1209	Relief-face friction in vibration tapping
L. S. Bayoumi	1223	Flow and stresses in round–oval–round roll pass sequence
K. Komori	1235	Analysis of cross and vertical buckling in sheet metal rolling
M. M. Moshksar and R. Ebrahimi	1247	An analytical approach for backward-extrusion forging of regular polygonal hollow components
He Ling-Hui	1265	Axisymmetric response of circular plates with piezoelectric layers: an exact solution
S. Sen, B. Aksakal and A. Ozel	1281	A finite-element analysis of the indentation of an elastic-work hardening layered half-space by an elastic sphere
A. Wineman, T. Van Dyke and S. Shi	1295	A nonlinear viscoelastic model for one dimensional response of elastomeric bushings
Calendar	I	
Announcements	V
